

Directory of Sustainability Programs

The following material is intended for people—students, teachers, professionals, and anyone else—interested in sustainability education. This is not to be considered a complete list; rather, it should be used as a tool to get started in researching the vast array of sustainability programs in the world. Berkshire Publishing Group invites readers to add comments and further recommendations at TheSustainabilityProject.com.

Addressing the challenge of sustainability will take approaches from every angle. To equip future generations with the awareness of the challenges and the tools we have at hand will require extensive educational materials, programs, and resources for students and teachers. The *Berkshire Encyclopedia of Sustainability* provides a window into this world and we hope the following collection of resources will open many more views on this expansive field.

Through the pages of this encyclopedia, authors have explored education from many angles, from business education in volume 2 (*The Business of Sustainability*) to environmental law education in volume 3 (*The Law and Politics of Sustainability*) to environmental education in India in volume 7 (*China, India, and East and Southeast Asia: Assessing Sustainability*). Julie Newman, director of the Yale Office of Sustainability, introduced readers to the challenge of education for sustainability in volume 1, *The Spirit of Sustainability*. She begins:

Our educational system is designed to contribute to the well-being of society at the present and into the future through the creation and dissemination of knowledge and the education of its citizenry. The challenge at hand is to understand and determine how best to design our educational systems in a manner that both contributes to and, in essence, designs a sustainable future. One

broad-level approach is shaped by the United Nations Educational, Scientific, and Cultural Organization (UNESCO), which proposes that the goal of the United Nations Decade of Education for Sustainable Development (2005–2014) is to implement a process to “. . . make decisions that consider the long-term future of the economy, ecology and equity for all communities; to reorient education systems, policies and practices in order to empower everyone, young and old, [and] to make decisions and act in culturally appropriate and locally relevant ways to redress the problems that threaten our common future (De Rebello, 2003).”

Following the 1972 Earth Summit in Stockholm, Sweden, interdisciplinary environmental education became popular. Twenty five years ago, publication of the Brundtland report, commonly known as *Our Common Future*, further contributed to the development of broader interdisciplinary program with a focus on “sustainability.” The fact that the UN declared the years 2005–2014 as a “Decade of Education for Sustainable Development” was extraordinary. The publication of “World Trends in Education for Sustainable Development” in 2011 was a major initiative and a milestone. There are international journals (e.g. the *International Journal of Sustainability in Higher Education*). There have been declarations such as The Talloires Declaration, which has over 400 institutional signatories vowing that higher education institutions will be leaders in sustainability. There are supporting agencies that provide resources and convene conferences for educators (e.g., ACTS Australasian Campuses Towards Sustainability, AASHE Association for the Advancement of Sustainability in Higher Education). Numerous conferences have been dedicated to sustainability in higher education; one of the most recent was the GUNI Report 2011 *Higher Education in the World 4*,

Higher Education's Commitment to Sustainability; From Understanding to Action. (The article in this volume titled “Education, Higher,” is an adaptation of this report.)

Sustainability has a place in all disciplines of higher education from science to drama and theater. The introduction of sustainability courses and degree programs in higher education, however, has prompted many questions. For example, is there clarity between education *about* sustainability, and education *for* sustainability? (For instance, a university may provide education about sustainability, by teaching about ecology, natural resource use, etc., but its physical campus—and indeed, even its offshore business dealings—may be at odds with the sustainability issues that are taught about on the campus; the campus itself, therefore, may not be practicing what it preaches.) It is increasingly evident that education *about* sustainability needs to be different from traditional forms of education (Environmental Science Scientist 2009; Jones et al. 2010).

There are many critics of sustainability in higher education. Walter Leal Filho in 2000 summarized some criticism as including: sustainability is not a subject *per se*, it's too theoretical, it's too broad, it's too recent a field, and it's a fashion. In a recent communication with Berkshire Publishing Group he said “I am sad to say that many of the barriers still remain today.” It is very important to address such criticism, especially with an emerging subject such as sustainability. Librarians need to know how to categorize sustainability materials in the best way possible so that students can find what they are looking for. Such barriers have been addressed in a positive way, however, and a good example is the paper by education professor Janet Moore (2005) in which she offers recommendations on how to create institutional change and sustainability education. (“Seven recommendations for creating sustainability education at the university level: A guide for change agents,” *International Journal of Sustainability in Higher Education*, 6:4, pp. 326–339.)

Sustainable Management Education

In *The Business of Sustainability*, Nicola Acutt provides a look at sustainability management education in the twenty-first century:

Sustainable management education is about more than changing lightbulbs or switching to recycled paper on campus. It is about rethinking what is taught and how it is taught, and reassessing the connections between what is learned in the classroom and the impact of managers' actions in the world. It is the combination of educational context, learning processes, and content designed to prepare business students to engage in the imperative—and interconnected—management issues of the twenty-first century. . . . It is ultimately about imparting the knowledge, teaching the skills, and

developing the competencies and courage of managers, entrepreneurs, and leaders to create a future that is ecologically sound, socially just, and economically viable for future generations.

Outlook on Law Education

In *The Law and Politics of Sustainability*, contributors grappled with the concept of sustainability law, which, while still a somewhat amorphous field, is gaining prominence in international law as sustainable development is invoked more and more. The 2012 United Nations Conference on Sustainable Development (known as “Rio+20”) is one example of the increasing prominence of the field. It was one of the largest United Nations events in history and, it is to be hoped, will help to push the nascent field of sustainability law along. More established than sustainability law, which considers an inherent interconnection among environmental, economic, and social issues, is environmental law.

In volume 3, University of Cambridge law professor Catherine MacKenzie gives readers a sense of the emergence of environmental law education worldwide:

Environmental law education has developed rapidly over the last forty years in response to the development of environmental law in the same period. The curriculum is now well defined, and some law schools have developed significant expertise in this area of law. The challenge now is to integrate environment and sustainability into all aspects of mainstream legal education so that environment and sustainability become a central aspect of legal decision making, instead of an optional subject designed primarily for specialists. Courses on environmental law are generally integrated into professional and advanced degrees, but integration of sustainability into all areas of law school operations is still at an early stage in many schools.

Environmental law is one aspect of state, national (in the United States, federal), and international law and is usually studied in those contexts. A law school may, for example, offer courses on the environmental laws of its own state, national (federal) environmental law, and international environmental law. Within the European Union (EU), the environmental law of the EU is often offered.

Schools with extensive environmental law curricula often subdivide environmental law further according to topic. Such schools may, for example, offer separate courses on state biodiversity law, national or federal biodiversity law, international biodiversity law, and (within the EU) EU biodiversity law. This degree of specialization is possible only in a small number of U.S. and other law schools that have highly developed environmental law programs.

In the United States, Vermont Law School (VLS) has the largest, and often top-ranked, environmental law program. Other highly ranked environmental law programs in the United States generally include Florida State University, Georgetown University, Lewis and Clark Law School, New York University, Pace University School of Law, University of California at Berkeley, University of Colorado at Boulder, University of Maryland, University of Oregon, and Stanford University.

Sustainability in Continuing Professional Development

Accredited educational programs are compulsory for many professions. For example, to become a planning officer in local government, it will almost certainly require a course of education that is recognized and “accredited” by that profession. After graduation, there is an expectation that practitioners will undertake continuing professional development (CPD). For some professions this is compulsory. CPD credits are obtained by way of attending conferences, research presentations, publishing and attending workshops. CPD is required for an individual to become certified and for an individual to retain their certified status. This is to ensure retention of competency and professional standards of practice.

Knowledge continues to advance in all professions. “Greening the workplace” is becoming a catch phrase. In many professions we are seeing more and more expectations of sustainability credentials and sustainability literacy. What opportunities are there for CPD in sustainability? More and more professional institutes are offering programs. For example, the Association of Energy Engineers has the Certified Sustainable Development Professional (CSDP) Program which, among other things, “raises the professional standards of those engaged in sustainable development.” There is the International Society of Sustainability Professionals (ISSP) for those who are committed to making sustainability standard practice. In 1999 Professional Practice for Sustainable Development (PP4SD) was launched and works with professional institutes to create a common curriculum framework for sustainable development (Martin, 2009). Finally, some individuals have made it their business as consultants to offer educational and CPD opportunities in sustainability.

Sustainability Science: An Emerging Discipline

In the directory that follows, we highlight just some of the academic programs that are part of the new discipline of “sustainability science,” which includes dozens of

undergraduate doctoral degree programs in sustainability. Kansas State University Geography Professor Lisa Harrington explores the development of this discipline and the efforts to define it in her piece “Sustainability Science” in *Measurements, Indicators, and Research Methods*. Here she helps readers distinguish sustainability science from other disciplines:

Sustainability science refers to the general pursuit of knowledge related to sustainable development, or strengthening societal transformation to more sustainable conditions. Like sustainable development concepts (or simply “sustainability”), sustainability science recognizes various spheres of interest, including environmental sustainability, economic development, human development, and cultural sustainability. Although science, broadly speaking, has traditionally avoided applications of value judgments, sustainability science developed with explicit recognition that sustainability involves choosing among what people may judge to be better or worse outcomes, and that the alternatives among which we choose are judged on the basis of human (and environmental) well-being. As noted by the Harvard professor of international science, public policy, and human development, William C. Clark, “Sustainability science is a field defined by the problems it addresses rather than by the disciplines it employs.”

Key Organizations and Resources for Educators

We hope that the following list of organizations and resources will be helpful to educators and others. Please note that this list is NOT, by any means, to be considered

a complete list; an organization's or program's appearance (or not) on this list does not imply any endorsement by the publisher or the editors of the *Berkshire Encyclopedia of Sustainability*. Berkshire Publishing Group invites readers to add further recommendations at TheSustainabilityProject.com.

Directory of Academic Sustainability Programs and Research Centers

There is a vast amount of research on sustainability. Some tertiary educational institutes have “sustainability research clusters,” or sustainability research institutes, and even research departments, focused entirely on sustainability. Some countries have established institutes with a focus on research in sustainability, such as the Canada-based International Institute for Sustainable Development (IISD). Almost every discipline has launched sustainability research such as “agriculture and sustainability” or “design and sustainability.”

Below is a partial list of selected academic institutions that have sustainability degree programs or research institutes. This list does not include the myriad programs in environmental studies and only captures a slice of this burgeoning field of study. We are grateful to the American Association for the Advancement of Sustainability in Higher Education (AASHE), which has made material similar to this directory publicly available and keeps it maintained on their website: <http://www.aashe.org/>. As before, Berkshire Publishing Group invites readers to add further recommendations at TheSustainabilityProject.com. We particularly welcome suggestions for programs outside of the United States.

This is NOT to be considered a complete list, or to suggest that any one program is better than any other; it is but a starting point of some of the many programs in the world for the student interested in studying sustainability. Please visit TheSustainabilityProject.com if you would like to suggest a program that is not on this list.

ACADEMIC PROGRAMS WITH A GENERAL SUSTAINABILITY FOCUS

Acadia University
 Environmental & Sustainability Studies
BA in Environmental and Sustainability Studies
 Wolfville, Nova Scotia, Canada
<http://environment.acadiau.ca/>

Antioch University
 Glen Helen Ecology Institute
Various programs

Antioch University-Los Angeles
MA in Urban Sustainability
 Los Angeles, CA, USA
www.antiochla.edu/academics/ma-urban-sustainability

Antioch University, New England
MA in Advocacy for Social Justice and Sustainability
 Keene, NH, USA

Appalachian State University
 Department of Sustainable Development
BS in Sustainable Development

**DESIGN SCHOOL ACADEMIC CENTERS
AND RESEARCH INITIATIVES ON
SUSTAINABILITY**

Brooke Byers Institute for Sustainable Systems
Georgia Institute of Technology
Atlanta, GA, USA

Center for Sustainability
Pennsylvania State University
State College, PA, USA

Center for Sustainable Cities
University of Kentucky
Lexington, KY, USA

Center for Sustainable Communities
Ambler College, Temple University
Ambler, PA, USA

Center for Sustainable Building Research
University of Minnesota, USA
Minneapolis, MN, USA

Center for Sustainable Design
Mississippi State
Mississippi State, MS, USA

Center for Sustainable Systems
University of Michigan
Dearborn, MI, USA

Center for Urban and Community
Design
University of Miami
Coral Gables, FL, USA

College of Environmental Design
University of California, Berkeley
Berkeley, CA, USA

Design Center for Global Needs
San Francisco State University
San Francisco, CA, USA

Ecological Design Center
University of Oregon
Eugene, OR, USA

ecoMOD Project
University of Virginia
Charlottesville, VA, USA

Engineering and Design Institute
Philadelphia University
Philadelphia, PA, USA

Environmental Institute
Cleveland State University
Cleveland, OH, USA

Green Design Institute
Carnegie Mellon University
Pittsburgh, PA, USA

Green Design Research Collaborative
Iowa State University
Ames, IA, USA

International Center for Sustainable New Cities
Illinois Institute of Technology
Chicago, IL, USA

Powell Center for Construction and
Environment
University of Florida
Gainesville, FL, USA

Sustainable Systems Research Center
Rochester Institute of Technology
Rochester, NY, USA

BUSINESS SCHOOL ACADEMIC CENTERS AND RESEARCH INITIATIVES ON SUSTAINABILITY

Allwin Initiative for Corporate Citizenship
Dartmouth College
Hanover, VT, USA
<http://mba.tuck.dartmouth.edu/initiative/>

Batten Institute's Sustainable Business Initiative
University of Virginia
Charlottesville, VA
www.darden.virginia.edu/web/Batten-Institute/

Brooke Byers Institute for Sustainable Systems
Georgia Institute of Technology
Atlanta, GA, USA
<http://sustainability.gatech.edu/>

Building Sustainable Value Research Center
University of Western Ontario
London, ON, Canada
