A new classic in a new edition, the Berkshire Encyclopedia of World History takes us from the Big Bang to the 21st century

“One of the great strengths of this unique resource is that although it is accessible to novices and younger users, it is still useful to more advanced researchers and scholars. It succeeds in tying specific and local histories to larger patterns and movements. Overall, this magnificent set provides an interconnected and holistic perspective on human history and is recommended for most libraries.” — Booklist

A FEW OF THE 100 NEW ARTICLES IN THE REVISED AND EXPANDED 2ND EDITION

- “Big History” by David Christian, Macquarie University, Australia
- “Economic Cycles” by William H. McNeill, University of Chicago, Emeritus
- “Printing” by Elizabeth L. Eisenstein, University of Michigan, Emerita
- “Trees” by Oliver Rackham, Corpus Christi College, Cambridge
- “United States of America” by Thomas Bender, New York University
- “Egypt” by Jason Thompson, Colby College

“All challenging traditional encyclopedias that offer the standard who, what, when, and where, the second edition of the Berkshire Encyclopedia of World History continues to focus on cultural comparisons and interactions using broad themes.... Other encyclopedias lack much of the unique content offered in this work, and do not focus on the historical significance of topics such as sweet potatoes and trees or discuss emerging trends such as “big history” and trade cycles. Highly recommended.” — Choice
